

Amendments to the Specification:

Please add the following new paragraph at the end of the section of the application, as amended, entitled "Brief Description of the Drawings." (Note that this section of the application was previously amended on May 6, 2003, in "Amendment A" and again on December 19, 2003 with "Amendment B".)

FIG. 16 is a side elevational view of another embodiment of the present invention.

Please add the following new paragraph at the end of page 9 of the application as filed. (Note – this new paragraph should be inserted after paragraph [0032] of the published application.)

As described above, the various embodiments of the invention combining the described features are contemplated. Thus, FIG. 16 is a side elevational view of another embodiment of the invention, combining various features described above. FIG. 16 is similar to FIG. 9, except that, as previously described, components 20 are lodged in cavities in core 12. Thus, the exemplary embodiment of FIG. 16 show two components 20 placed in cavities formed in the upper and lower surfaces 12a, 12b, of core substrate 12. Substrate 12 has two patterned metal layers 14, 40 and two dielectric layers 30, 60 over upper surface 12a. Likewise, substrate 12 has two patterned metal layers 16, 42 and two dielectric layers 32, 64 below lower surface 12b. A metal lined via 46 extends through the structure, and other vias are formed through one or more of the layers. Thus, for example, via 70 extends from the surface to a contact pad 26 on one of the components 20.
